

# AHMED HUZAIFA MALIK

Data Analyst | Data Scientist

(+92)3175569176 | ahmedhuzaifamalik@gmail.com | Mansehra, Pakistan | [LinkedIn](#) | [GitHub](#)

## SUMMARY

Data Science undergraduate with a strong foundation in Data Analysis, Machine Learning, and Statistical Modeling. Proficient in Python, SQL, and Microsoft Excel with hands-on experience in data preprocessing, visualization, and model training. Developed and deployed projects ranging from a deployed fraud detection API to customer churn and business analytics dashboards, demonstrating strong problem-solving and analytical skills. Passionate about building data-driven solutions and eager to contribute technical expertise within innovative, collaborative teams.

## EDUCATION

**Pak-Austria Fachhochschule Institute of Applied Sciences and Technology** Haripur, Pakistan  
*Bachelor of Science in Data Science* 2023 – Current

### Relevant Coursework & Certifications

Data Analyst in Python (DataCamp), Data Visualization with PowerBI and Tableau (DataCamp), SQL Fundamentals (DataCamp), Data Literacy (DataCamp), Introduction to Data Analytics (Meta), Python Data Analytics (Meta)

## TECHNICAL SKILLS

- Languages:** Python, SQL
- Developer Tools & Software:** Microsoft Excel, Microsoft Power BI, Microsoft Word, VS Code, Google Colab, Docker, FastAPI, Git/GitHub
- Domains:** Data Science, Data Analytics, Data Visualization, Machine Learning
- Soft Skills:** Teamwork, Communication (B2 English)

## WORK EXPERIENCE

**Teyzix Core** Lahore, Pakistan  
*Data Analytics Intern* June 2026 – July 2026

- Built a customer churn prediction model and deployed it as an interactive Streamlit dashboard for live risk scoring.
- Performed a complete data analytics project by creating a realistic business dataset, cleaning and transforming data, conducting exploratory analysis, generating insights, and presenting findings through an interactive dashboard.
- Completed standalone retail sales and public transport analytics projects, producing Power BI dashboards and written reports for non-technical stakeholders.

**Qwetrum Technologies** Lahore, Pakistan  
*Data Analysis Intern* June 2026 – July 2026

- Contributed to assigned technical projects within the June 2026 remote cohort under professional mentorship.
- Applied data cleaning, exploratory analysis, and visualization techniques to real-world project datasets.
- Delivered analysis projects across the internship program, covering SQL querying, A/B testing, exploratory data analysis, and machine learning workflows.

**Digital Empowerment Network** Islamabad, Pakistan  
*Data Science Intern* July 2025 – Sept 2025

- Executed comprehensive data collection, cleaning, and preprocessing workflows to prepare datasets for analysis.
- Conducted data visualization tasks to identify trends and patterns within complex datasets.
- Performed model training and tuning to optimize machine learning algorithms for better performance.

**DevelopersHub Corporation** Islamabad, Pakistan  
*Data Science Intern* April 2025 – June 2025

- Managed end-to-end data pipelines including data collection, cleaning, and preprocessing.
- Developed visualizations to communicate data insights effectively.
- Assisted in model training and tuning to refine predictive capabilities.

## PROJECTS

### Fraud Detection System & Live API | *LightGBM, FastAPI, Docker, Cloud Deployment*

- Built an end-to-end fraud detection system on the IEEE-CIS dataset (590,000+ transactions, 3.5% fraud rate), using a time-based train/test split to prevent temporal leakage.
- Trained a LightGBM model with class-weighting for severe class imbalance, achieving PR-AUC of 0.548 against a 0.186

logistic regression baseline; selected PR-AUC over accuracy given the 3.5% positive rate.

- Deployed the model as a containerized FastAPI service (Docker) to a live public cloud endpoint, validating prediction consistency between the training notebook and the deployed API.

#### **Customer Churn Prediction Dashboard** | *Machine Learning, Python, Scikit-learn, Streamlit*

- Built an end-to-end customer churn prediction system on the Telco dataset (7,000+ customers), comparing Logistic Regression, Random Forest, and XGBoost.
- Selected Logistic Regression as the final model based on recall (0.78) and ROC-AUC (0.84), the metrics most aligned with early identification of at-risk customers.
- Deployed the model through an interactive Streamlit dashboard providing live churn-probability scoring and Low/Medium/High risk segmentation for retention targeting.

#### **E-Commerce Business Analytics & Power BI Dashboard** | *SQL, Statistical Analysis, Power BI, Python*

- Built an end-to-end analytics project on a multi-table e-commerce dataset (10,000+ orders), using SQL to extract and aggregate key business metrics across customers, products, and channels.
- Performed statistical analysis including a Chi-Square hypothesis test, identifying a significant difference in product return rates across categories ( $p < 0.001$ ).
- Designed an interactive Power BI dashboard answering six business questions on revenue, profit, channel performance, and customer segments, with a written analytics report for non-technical stakeholders.
